

Our Mission

**US Army Corps
of Engineers
Transatlantic Programs Center**

A Full Spectrum Engineering Force

The Transatlantic Programs Center provides quality, responsive engineering services to deployed U.S. military forces, other U.S. government agencies, and friendly foreign defense forces. Under U.S. Defense Department auspices, the work is carried out in the Middle East, Africa, and Russia. The major categories of work are as follows:

- ◆ Engineering, construction, and contracting services for U.S. military organizations in peacetime and during contingency operations. These services are provided to U.S. Central Command, a major unified command, for operations in the Middle East region. Additionally, at the request of U.S. Army Europe, the agency is providing contracted logistics support for the U.S. military deployment in the Balkans.
- ◆ Assistance to foreign defense agencies under the Defense Department's foreign military sales program, which permits eligible foreign governments to purchase defense equipment and services, including the Corps' design and construction expertise. In a non-engineering role, the Transatlantic Programs Center sponsors the Ordnance Program Division, which assists the Saudi Arabian Army Ordnance Corps and the Royal Saudi Land Forces with their ordnance and logistics mission.
- ◆ Design and construction of a facility in Russia to reduce the threat of weapons of mass destruction; this work is under the Defense Department's Cooperative Threat Reduction Program.
- ◆ Civil and humanitarian assistance to friendly foreign governments
- ◆ Assistance to other U.S. government agencies that request Corps services.
